

Appendix II: decision scheme

Figure 1

Decision flow-chart

Include for full text screening.

Rules for full text screening:

- Check of all of the above still applies
- Check if the impact on identity is evaluated in the study (e.g. measured quantitatively, evaluated by the researcher, or outcome of qualitative feedback) → if not: discuss relevance of the article in consensus meeting.
- Check if identity is a pre-specified aim → if not: exclude, but mark as relevant for discussion (e.g. : Identity is an unexpected or post-hoc outcome mentioned by participants, caregivers, therapists or researchers).
- Check if the article is peer-reviewed

NOTE: If for any step the answer is 'unclear': check if the other questions apply. If not: exclude. If all other questions apply: mark as unclear, and add the reason why this is so. The guiding document with inclusion criteria delineates more details about the decision criteria.
